

Reduce the time to soluble, active proteins with eProtein Discovery™

Rapidly access your proteins to accelerate your research

Proteins are often the cornerstone and starting point of biological research. However, obtaining the proteins of interest can be difficult. Nuclera has developed the eProtein Discovery™ system, a “pipette and forget” benchtop device with the footprint of a PCR machine, that harnesses the potential of digital microfluidics and cell-free systems to enable you to go confidently from DNA to soluble, purifiable proteins in 48 hours.

The seminar will include:

- > How can eProtein Discovery™ help streamline your protein research?
- > Description of the technologies behind eProtein Discovery™
- > Case studies of challenging proteins obtained using eProtein Discovery™
- > Future capabilities
